

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tflite_BroadcastToOptionsT {
    }
    tflite_BroadcastToOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'NativeTable', while the two lower compartments are empty. Below it is the 'tflite::BroadcastToOptionsT' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'tflite::BroadcastToOptionsT'. The middle compartment is shaded gray and is empty. The bottom compartment is also shaded gray and contains two lines of text, both starting with a plus sign: '+ BroadcastToOptionsT()' and '+ BroadcastToOptionsT()'. A blue arrow with an open triangular head points from the top of the 'tflite::BroadcastToOptionsT' class to the bottom of the 'NativeTable' class, indicating that 'tflite::BroadcastToOptionsT' inherits from 'NativeTable'.
