

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tflite_WhileOptionsT["tflite::WhileOptionsT"] {
        +cond_subgraph_index
        +body_subgraph_index
        +WhileOptionsT()
        +WhileOptionsT()
    }
    tflite_WhileOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle divided into three horizontal sections. The top section contains the class name. Below it is the 'tflite::WhileOptionsT' class, also a rectangle divided into three sections. The top section contains the class name, the middle section contains two public attributes ('+ cond_subgraph_index' and '+ body_subgraph_index'), and the bottom section contains two public methods ('+ WhileOptionsT()'). A blue arrow with an open triangular head points from the 'tflite::WhileOptionsT' class up to the 'NativeTable' class, indicating that 'tflite::WhileOptionsT' inherits from 'NativeTable'.

tflite::WhileOptionsT

+ cond_subgraph_index
+ body_subgraph_index

+ WhileOptionsT()
+ WhileOptionsT()
