

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tfliteCustomQuantizationT["tflite::CustomQuantizationT"] {
        + custom
        + CustomQuantizationT()
        + CustomQuantizationT()
    }
    tfliteCustomQuantizationT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'NativeTable', while the two lower compartments are empty. Below it is the 'tflite::CustomQuantizationT' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'tflite::CustomQuantizationT'. The middle compartment contains the text '+ custom'. The bottom compartment contains two lines of text: '+ CustomQuantizationT()' and '+ CustomQuantizationT()'. A blue arrow with an open triangular head points from the top of the 'tflite::CustomQuantizationT' class to the bottom of the 'NativeTable' class, indicating that 'tflite::CustomQuantizationT' inherits from 'NativeTable'.

tflite::CustomQuantizationT

+ custom
