

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tflite_QuantizeOptionsT["tflite::QuantizeOptionsT"] {
        + QuantizeOptionsT()
        + QuantizeOptionsT()
    }
    tflite_QuantizeOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle divided into three horizontal sections. The top section contains the text 'NativeTable', while the two sections below are empty. Below 'NativeTable' is the 'tflite::QuantizeOptionsT' class, represented by a rectangle divided into three horizontal sections. The top section contains the text 'tflite::QuantizeOptionsT'. The middle section is shaded gray and is empty. The bottom section is also shaded gray and contains two lines of text: '+ QuantizeOptionsT()' and '+ QuantizeOptionsT()'. A blue arrow with an open triangular head points from the top edge of the 'tflite::QuantizeOptionsT' class box to the bottom edge of the 'NativeTable' class box, indicating that 'tflite::QuantizeOptionsT' inherits from 'NativeTable'.
