

NativeTable

```
classDiagram
    class NativeTable
    class tfBatchMatMulOptionsT["tf::BatchMatMulOptionsT"] {
        +adj_x
        +adj_y
        +asymmetric_quantize_inputs
        +BatchMatMulOptionsT()
        +BatchMatMulOptionsT()
    }
    tfBatchMatMulOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the name 'NativeTable', while the two lower compartments are empty. Below it is the 'tf::BatchMatMulOptionsT' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. The middle compartment lists four attributes: '+ adj_x', '+ adj_y', '+ asymmetric_quantize', and '_inputs'. The bottom compartment lists two methods: '+ BatchMatMulOptionsT()' and '+ BatchMatMulOptionsT()'. A blue arrow with an open triangular head points from the 'tf::BatchMatMulOptionsT' class up to the 'NativeTable' class, indicating that 'tf::BatchMatMulOptionsT' inherits from 'NativeTable'.

tf::BatchMatMulOptionsT

+ adj_x
+ adj_y
+ asymmetric_quantize
_inputs

+ BatchMatMulOptionsT()
+ BatchMatMulOptionsT()
