

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tfliteReducerOptionsT["tflite::ReducerOptionsT"] {
        +keep_dims
        +ReducerOptionsT()
        +ReducerOptionsT()
    }
    tfliteReducerOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name 'NativeTable', while the two lower compartments are empty. Below it is the 'tflite::ReducerOptionsT' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the class name 'tflite::ReducerOptionsT'. The middle compartment contains the attribute '+ keep_dims'. The bottom compartment contains two methods, '+ ReducerOptionsT()', stacked vertically. A blue arrow with an open triangular head points from the 'tflite::ReducerOptionsT' class up to the 'NativeTable' class, indicating that 'tflite::ReducerOptionsT' inherits from 'NativeTable'.
