

NativeTable

```
classDiagram
    class NativeTable {
    }
    class tflite_TransposeConvOptionsT {
        +padding
        +stride_w
        +stride_h
        +TransposeConvOptionsT()
        +TransposeConvOptionsT()
    }
    tflite_TransposeConvOptionsT --|> NativeTable
```

The diagram illustrates a class hierarchy. At the top is the 'NativeTable' class, represented by a rectangle with three horizontal compartments. The top compartment contains the text 'NativeTable', while the two lower compartments are empty. Below it is the 'tflite::TransposeConvOptionsT' class, represented by a rectangle with three horizontal compartments. The top compartment contains the text 'tflite::TransposeConvOptionsT'. The middle compartment contains three attributes: '+ padding', '+ stride_w', and '+ stride_h'. The bottom compartment contains two methods: '+ TransposeConvOptionsT()' and '+ TransposeConvOptionsT()'. A blue arrow with an open triangular head points from the top edge of the 'tflite::TransposeConvOptionsT' class to the bottom edge of the 'NativeTable' class, indicating that 'tflite::TransposeConvOptionsT' inherits from 'NativeTable'.

tflite::TransposeConvOptionsT

+ padding
+ stride_w
+ stride_h

+ TransposeConvOptionsT()
+ TransposeConvOptionsT()
